

To whom it may concern,

I Trino Pedraza from the water utility of the city of Griffin, GA USA would like to recommend the use of Utilis satellite leak detection technology.

This technology is based on satellite radar technology for finding leaks in the urban distribution pipe networks. After using this method I am quite sure that it is an effective tool for lowering NRW.

I would personally suggest that any utility that is serious about the war against leaks use this technology and am open to share my experience and knowledge with you.

Sincerely,

Trino Pedraza

Trino Pedraza
Deputy Director of Water/Wastewater
